Exercise – GAE

In this exercise you will have to work with Google App Engine. Try to implement a ToDo application by following these really detailed tutorials:

- Java, more complex, http://www.vogella.de/articles/GoogleAppEngineJava/article.html
- Python, quicker, http://www.vogella.com/tutorials/GoogleAppEngine/article.html

Extend the example with the following functionality:

- Include Importance of ToDo's (display and sorting shall be possible)
- Include a history page with finished ToDo's

Provide a short documentation of your approach as well as your code and be able to explain it (deadline: 30.1.2015)
